The faculty senate’s Information Technology Committee is responsible for academic computing at Central Connecticut State University. “Academic computing” includes: faculty computing, classrooms, labs, software, training, and the websites of schools, departments, and faculty members.

The ITC is charged with:

- Prioritizing **all projects** related to academic computing. Purchases formerly handled through the budget process, through appeals to deans, or to the CIO, or through departmental expenditure, should be referred to the ITC for consultation and prioritization.

- Developing **policy recommendations** related to academic computing.

- Reviewing **all policies** that impact academic computing.

The ITC reports to:

- Like all standing committees of the senate, the ITC reports out annually to the senate.

- Policy recommendations and purchasing priorities will be reported to the newly-created Information Technology Governance Committee. (ITC is represented on this committee.)

In order to expedite the gathering of information, the ITC no longer expects its members to canvass specific constituencies. Instead, the ITC will create a web-based form for requests from faculty members and other academic-computing stakeholders. This form will be created in consultation with the ITS help desk.

At present, the ITC wishes to keep its structure, and proposes two changes to its by-laws:

- Ex officio members shall be allowed to vote.

- There is no set number of members required for a quorum, though at least one officer must be present for a meeting.
